

Executive Brief (1-Page Version)

Strategic Reconstruction Framework (SRF) & Post-CCP Recovery Plan for Mainland China

1. Purpose

This brief outlines two critical strategic initiatives:

1. SRF – Semiconductor Reconstruction Fund

A rapid, globally coordinated program to replace China-dependent supply chains.

2. Post-CCP China Recovery Plan (THP-0 China)

A *non-intervention, humanitarian-first, city-unit* reconstruction framework.

Both documents avoid political value-judgment and focus strictly on global stability.

2. Background: Systemic Collapse of China

- China's industrial capacity is entering **structural failure** (power grid collapse, water scarcity, halted chemical plants, semiconductor dead-lines).
- Supply chains cannot recover within any meaningful time horizon.
- World markets face a synchronized shock in **batteries, chemicals, PCBs, DRAM/NAND**.

3. SRF – Semiconductor Reconstruction Fund

Objective

Replace China-dependent production with a diversified G7–ASEAN supply network within **18–36 months**.

Core Principles

- **Not a bailout** – a **global substitution program**.
- **Selective rescue only** (Hynix is viable; Samsung = partial & limited to critical lines).
- **Japan-led financing, U.S. technological anchoring, ASEAN deployment**.

Key Actions

1. **Hynix stabilization package** (JPYC-backed liquidity + restructuring).
2. **Kioxia–Micron anchor alliance** (DRAM/NAND redundancy).
3. **Japan chemical & battery surge capacity** (rapid scaling via national program).
4. **ASEAN relocation for PCBs, assembly, and packaging**.
5. **CLEAR-based audit trail** for transparency and international trust.

Budget Estimation

Approx. **¥10 trillion** ($\approx$ USD 65–70bn).

“Cheap for preventing global semiconductor failure.”

4. THP-0 China (Post-CCP Reconstruction)

Principles

- No regime-change operations
- Strict non-intervention
- Humanitarian corridors first
- City-by-city administrative restoration
- Infrastructure recovery without political alignment

Why City Units?

Nation-wide governance restoration is impossible; Shanghai, Shenzhen, Chengdu, Chongqing, Tianjin, etc. must be treated as individual humanitarian + economic zones.

Japan’s Role

- Provide **logistics & verification**.
- Deploy **CLEAR transparency layer**.
- No military presence.
- No political leverage exercised.

5. Strategic Outcome

- Rapid stabilization of global supply chains.
- Controlled transition in mainland China.
- Dollar-dependence reduced without destabilizing markets.
- Yen-anchored “stability zone” emerging naturally.
- G7 unity preserved even if U.S. policy is unstable.

This brief is designed for immediate circulation inside:

BoJ (Policy Planning / International), Cabinet Secretariat, MOFA, G7 partners.
